

PLATINUM  (Energy Efficiency) **systems**

DAYLIGHTING

Platinum E² System Daylighting can be one of the most effective ways to increase your energy efficiency while increasing your productive lighting.

GOING GREEN?

Owners and managers who wish to display their commitment to the environment and reduce operating costs often use LEED or Energy Star Benchmarking as their guide. Daylighting is a great way to improve a building's energy efficiency, improve occupant productivity and reduce operating costs.

Some of the value added benefits of Daylighting can include:

- Return on investment of 1–3 years typical
- Improved worker productivity
- Improved building efficiency
- Improved product quality
- Increased retail sales
- Increased student learning

In addition to lowering the impact on the environment, reducing your carbon footprint and reducing your operating costs; daylighting may qualify for additional rebates, tax credits and incentives.

Designing and installing a proper Daylighting system requires knowledge of lighting and roofing combined. Platinum works with you to integrate your Daylighting system into your building to provide you with increased lighting while ensuring your building envelope remains under warranty. Additionally, Daylighting systems can increase occupant productivity and decrease HVAC loads as well. Contact Platinum to find out how Daylighting can put money into your pocket month after month.
